## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steven P. Skabrat on 2/14/06.

The application has been amended as follows:

**In Claim 1** line 12 change "to open a third secure connection between the trusted arbitrator and the target entity within the LAN" to "to open a third secure connection between the trusted arbitrator and one of the LAN, the connection entity, or the target entity,"

**In Claim 9** line 12 change "to open a third secure connection between the trusted arbitrator and the target entity within the LAN" to "to open a third secure connection between the trusted arbitrator and one of the LAN, the connection entity, or the target entity,"

**In Claim 17** line 16 change “to open a third secure connection between the trusted arbitrator and the target entity within the LAN” to “to open a third secure connection between the trusted arbitrator and one of the LAN, the connection entity, or the target entity,”.

*Allowable Subject Matter*

The following is an examiner’s statement of reasons for allowance:

Mcdonough US 6,714,982 teaches establishing a secure connection via an arbitrator between two entities. Mcdonough does not teach a connection entity, periodically transmitting a request from the connection entity to the trusted arbitrator to establish a third secure connection, or a first and second encryption scheme.

Voit US 6,104,711 teaches a proxy server that is used to connect from a client to a server through the Internet. Voit does not teach a secure connection between two entities via a trusted arbitrator, periodically transmitting a request from the connection entity to the trusted arbitrator to establish a third secure connection, or a first and second encryption scheme.

Namba US 5,966,448 teaches a method to convert a first encryption protocol to a second protocol using a system of servers. Namba does not teach a connection entity,

periodically transmitting a request from the connection entity to the trusted arbitrator to establish a third secure connection, or a secure connection between two entities via a trusted arbitrator.

Newton US 6,334,142 teaches periodically checking a web server for messages. Newton does not teach periodically checking to establish a secure connection between two entities via a trusted arbitrator, a connection entity, or a first and second encryption scheme.

Thus claims 1-17, 20-25, and 30-32 are allowable over the current art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
